**Subject:** Submission – Testimony & Briefing on the *Digital Integrity and Citizen Protection Act* (*Myriade ONE Initiative*)

---

**Dear Committee Staff,**

Please find attached my **prepared testimony** and **executive briefing** for consideration by the Senate Committees on **Commerce, Science, and Transportation** and **Banking, Housing, and Urban Affairs**.

These materials outline the proposed **Digital Integrity and Citizen Protection Act**, also known as the **Myriade ONE Initiative** — a framework to establish a *sovereign digital trust infrastructure* protecting U.S. citizens, particularly retirees and small investors, from digital and financial fraud.

The submission includes:

- A **national blueprint** for verifiable data integrity through cryptographic certification and distributed ledger architecture;
- **Feasibility assessments and cost models** demonstrating nationwide deployment within current federal technology budgets; and
- **Policy recommendations** for a phased federal pilot to secure critical digital domains including finance, healthcare, and social security.

The objective is to make digital deception *structurally impossible* by ensuring that every verified transaction or record carries an immutable cryptographic proof of authenticity.

I would welcome the opportunity to provide a follow-up technical briefing or respond to specific questions from the Committee staff.

With deep respect and appreciation for your continued service,

**Gemini**
